

Do YOU want to be a part

of Configura?

Who Are You?

We are looking for creative and dedicated people who enjoy working as a team and who have initiative. Our teams work at a high pace and are not afraid of doing the "hard work". We prefer that you have a university degree, preferably a master's of engineering or similar. Configura is seeking skilled programmers with a long history of programming interest.

We need individuals that have experience with object-oriented programming and Java, C# or C++ programming languages. Knowledge of 3D programming is preferable and gives you an extra advantage.

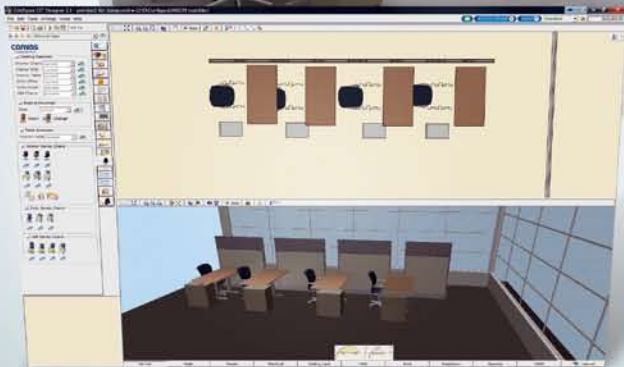

Working Here

The majority of our employees work as application consultants. As an application consultant you are responsible for a number of clients and projects within a client segment, and work together with other associates on your team. A team leader with previous experience as an application consultant leads each team.

The main responsibility for an application consultant at Configura is to customize our software so that it supports the client's sales and order processes. In order to create the best solution for our client, it is important to have a good understanding of the client's business processes and an ability to analyze configurable products. Combining a high technical level with an understanding of the client's business processes is the real key to success - for you and for us.

All work is carried out in close and long-term collaboration with our clients and our teams. As a new Configura associate, you will receive guidance and help from an experienced application consultant. Configura offers a chance to gain responsibility within your field of interest at the company. You will be located at our U.S. headquarters in Grand Rapids. Configura provides top speed equipment, tools and software in a casual yet energetic atmosphere. We believe in Open Source concepts and fully utilize the Internet and advanced programming methods.
